

Sanofi aventis

Year 6 travelled to Sanofi ventis in Alnwick for a lecture. Sanofi invited Year 6 to come and listen to a lecture about science around us. Sanofi had invited Jonathan Hare a Physicist to lecture us. Jonathan had starred on a show called Rough Science.

Jonathan Hare

Rough Science

The Rough Science team travel all around the world doing lot's of difficult challenges. First, Jonathan told us about the show Rough Science. Then he showed us some of the show when they were trying to make Gun Powder out of natural elements to go into a rocket. After, he showed us some crystals. Then he showed us some more of the show where they where looking for gold in New Zealand by panning. He also showed us how to make electricity from 8 potatoes in a line all connected together that was also connected to a mini Christmas tree with lights on and made it light up. We also found out that you can make electricity from salt water. You can also communicate with each other using light. He also said that Rough Science team had been set a very hard challenge and the challenge was to make a raft that could keep someone afloat. They also had to do a Spaceship message which the Rough Science team found the hardest they had ever done in Problem Solving.

The Experience was fascinating and everyone learnt a lot about science around us. Everyone here really enjoyed themselves and wanted to say thank you Jonathan Hare and Sanofi Aventis for this wonderful experience. Thank you for the extremely generous scientific bags of gifts.

Thank You
